OUR LOCATION

We are located about 20 miles from Boston on the Boston-Worcester Turnpike. Framingham is also on the main line of the Boston & Albany R.R., also on the New Haven R.R.

We cordially invite you to inspect our nurseries at your convenience. Salesmen are not in attendance on Sundays.

SHIPPING INSTRUCTIONS

Customers are requested to state explicitly the mode of conveyance and route by which they want their orders shipped. Otherwise we will use our own discretion. We will not, however, be responsible for delays or damage in transit, or loss in after-cultivation.

MOTOR DELIVERY. Orders of considerable size can best be delivered within a radius of one hundred miles, or even more, by motor truck. Trees so shipped arrive in the best condition. **DELIVERY CHARGES** will depend on the size of the load and the distance.

PRICES

The articles in the following list will be furnished at the annexed prices only when the quantity specified, of any given variety and size, is taken. **FIVE to TWENTY-FOUR** plants at the **TEN RATE**; **TWENTY-FIVE or MORE** at the **HUNDRED RATE**.

Specimens personally selected by the purchaser or his representative (or specially selected by us at his request) will be priced according to their individual values.

The prices are for the stock F.O.B. our nurseries.

The prices in this list cancel all previous prices.

GUARANTEE

We give no warranty, express or implied, as to quality, description, productiveness, or any other matter of any nursery stock that we sell.

No complaints will be considered that are not made within ten days after receipt of the stock.

N this New Price List we have attempted to accomplish the seemingly impossible. We have attempted to inject the information, usually found only in large unwieldy illustrated descriptive catalogs, into a small price list of convenient size.

To accomplish this it has been necessary to depart from accepted practice. It has been necessary to dispense with long sentences full of flattering praise—we have reserved our praise for those items which especially deserve praise. It has been necessary to classify trees and plants, not along botanical lines, but along practical lines, into groups which can be graphically presented. It has been necessary to tabulate information and refer to that information by means of code.

Perhaps we have overdone this matter of brevity; perhaps a little more verbosity would be acceptable. We are, however, positive that never before has such a wealth of useful and usable plant information been presented in a Nursery Price List of such small and convenient proportions.

We sincerely hope you will find it helpful.

TYPES OF EVERGREENS

To enable us to give accurate brief descriptions of Evergreens, we classify them into six types shown above.

- A. Large, roughly conical, medium to coarse texture.
- B. Narrow conical to columnar, medium to fine texture.
- C. Broad conical, medium to fine texture.
- D. Globose, including elliptical and flattened globe.
- E. Spreading, bush-form, not prostrate.
- F. Flat, prostrate or procumbent.

PROPORTIONS

We indicate the relation between height and breadth by figures such as 3/1. The first figure represents the relative (not actual) height; the second indicates the relative breadth.

MAXIMUM HEIGHTS

These vary under different conditions. The figures given represent an average—not the extremes.

RATES OF GROWTH

These also vary, but we give an approximate average rate per year, also the key letters used in the code.

VR—very rapid—over 18 inches. S—slow—4 to 8 inches.

R—rapid—12 to 18 inches. VS—very slow—under 4 inches.

M—medium—8 to 12 inches.

TRANSLATION OF DESCRIPTIVE CODE

We condense the above information into code form such as—B3/1—18' M. Reference to the above explanation indicates that the tree described is a narrow cone or column, its height about three times its breadth, a usual maximum height of eighteen feet, growing from eight to twelve inches a year.

EVERGREEN TREES

Our Evergreens have the quality necessary to provide excellent IMMEDIATE EFFECT—and heavy root masses to promote TRANSPLANTING SUCCESS.

We dig our Evergreens with a ball of the earth in which they are grown, and wrap them in burlap WITHOUT additional charge.

TYPES OF DECIDUOUS TREES

- A. Narrow columnar habit, branches erect.
- B. Oval or elliptic head, branches ascending.
- C. Conical head, branches ascending.
- D. Broad rounding head, branches spreading.
- E. Irregular habit, branches irregularly ascending or spreading.
- F. Branches ascending, arching, even drooping near ends.

Certain types such as B, C and D do not always show the characteristics depicted when young, but do so as they mature.

PROPORTIONS

We omit the indication of proportions of Deciduous Trees as they are not sufficiently constant to be of any practical value. The type sketches indicate the proportions in a general way.

RATES OF GROWTH

VR—very rapid—over 4 feet.

R—rapid—3 to 4 feet.

M—medium—2 to 3 feet.

S—slow—1 to 2 feet.

VS—very slow—under 1 foot.

**DECIDUOUS SHADE
AND ORNAMENTAL TREES**

Caliper measurements are taken 12 inches above ground. Varieties marked "B&B" are always dug with Ball and Burlapped at No Additional Cost.

<i>theifera</i>			<i>Tea Crab</i>
E—20' S. The following description is given by E. H. Wilson, Keeper of the Arnold Arboretum, who discovered this tree: "Rigid of branch, with wands of blossoms often 15 ft. long, the Chinese M. <i>theifera</i> is the very quintessence of Crab-apple loveliness. It is a small tree, seldom exceeding 20 feet in height, with sparse, upright and spreading, rather zigzag branches. When in blossom the whole branch is transformed into a floral plume into which it is impossible to thrust a finger without touching a flower. The petals are reddish pink in the folded bud, white or delicately stained with pale pink when fully expanded."

DECIDUOUS FLOWERING AND ORNAMENTAL SHRUBS

TYPES OF DECIDUOUS SHRUBS

- A. Stems erect, moderately branched, usually narrow.
- B. Stems spreading, then ascending or erect, moderately branched.
- C. Few stems, many branches.
- D. Many stems, few or no branches.
- E. Stems ascending or erect, arching, finally drooping.
- F. Low, spreading, sprawling.

Since few Deciduous Shrubs have a definite rate of growth, or constant ratios of height to breadth, we omit those items, but indicate the types and usual maximum heights.

AZALEAS

Our stock of Azaleas is all NURSERY GROWN, several times transplanted, having heavy masses of fibrous roots which insure superior results to the planter. They should not be compared with collected stock frequently offered.

AZALEA arborescens				<i>Sweet Azalea</i>
D—5'. The plants we offer of this species are of the absolutely true strain—they contain no trace of mongrel blood so often found. They are low, broad, dense, rounding. Flowers large, white, pink outside, midde June. This true strain of arborescens is a very desirable shrub, which should be more freely planted, particularly for mass effects.

D—3'. Low, broad, dense, rounding, with the lower branches resting on the ground. Leaves 2" long, ½" wide; in summer resemble those of the evergreen Alpine Rhododendrons, in fall a pleasing assortment of red shades. Blooms single, 1½"—2", fragrant, pure medium orchid-pink, profuse, mid-May to early June. We consider it one of the very best new plants which we have grown, and the late Prof. C. S. Sargent said, "It deserves a place in all New England collections."

WILSON'S CHINESE COTONEASTERS

Few recent additions to the horticulture of America have met with as much popularity as have the CHINESE COTONEASTERS introduced by Dr. E. H. ("Chinese") Wilson, Keeper of Arnold Arboretum, and famous horticultural explorer. These shrubs are all valuable for their profusion of flowers and fruits, and some for their glossy, semi-persistent leaves. We take pleasure in offering the following species to those who appreciate new and valuable plants.

COTONEASTER acutifolia villosula				<i>Peking Cotoneaster</i>

Hardy English Ivy

A plant of this sort has been needed for a long time. It is almost the same as the ordinary English Ivy in appearance, with leaves of practically the same shape, only a little smaller, also darker and richer in color, but in hardness it is entirely distinct, having survived severe winters at both the Arboretum and Framingham. While we believe that it will prove absolutely hardy, it may occasionally lose a branch or two in severe winters. But because of its excellent promise and low cost it should be tried. Is more of a creeper than a climber.

Hardy Perennials

OUR list of perennials contains the better sorts only. We have other varieties not listed, which we grow in limited quantities. We shall be pleased to quote on these when requested.

Varieties marked with an asterisk (*) are particularly suitable for the rock garden.

Do not expect to make effective plantings by choosing one or two of a large number of varieties. Better results are obtained by massing together several plants of a kind.

For this reason we are not quoting an "each" price on perennials. However, if only one plant of a kind is required, we will furnish it at one-third of the Three Rate.

PERENNIAL DESCRIPTIONS

For easy visualization of perennials we classify their flowers according to their **GENERAL APPEARANCE** as shown above, and not according to their botanical structure.

A few sorts are described by foliage characteristics. Other convenient information, such as height of plant, color and period of bloom, is also given.

WYMAN'S FRAMINGHAM NURSERIES

Framingham - Massachusetts

February 17, 1930

Dear Friends:

Here is a copy of my new price list. Will you take a few minutes right now and look it over? You will find it to be unique -- and useful. Many rare plants as well as fine specimens of both the new and the old sorts are listed.

You'll find two features about this new price list that should make it particularly interesting to you. I have listed some plants this year that I have in small quantities that cannot be obtained elsewhere - and I believe the list contains more of the really fine new plants than I have ever seen offered by one nursery before.

The new method used in the price list to give maximum information about a plant in minimum space will do much to make it easier to buy from us. It is the result of years of striving for something near enough perfection to be worth using - and I think we've done it this year.

I hope I may have the pleasure of seeing you at the nursery this year. There are new things coming along all the time and you'll find us able to make a visit both interesting and profitable to you.

Yours very truly,

WYMAN'S FRAMINGHAM NURSERIES

Richard M. Wyman.
